Andry Andrianarivelo

Maître de conférences in neuroscience
Université Paris Cité · Faculty of Pharmacy · Paris, France

andry.andrianarivelo@u-paris.fr
ORCID: 0000-0002-6369-4201 · GitHub: Andrianarivelo

RESEARCH

Cellular and molecular mechanisms of addiction; cerebellar activity and locomotor learning; cerebellar links to reward and motivation. Quantitative analysis of neural signals and behavior.

ACADEMIC APPOINTMENTS

2026 - present | Maître de conférences
Université Paris Cité, Faculty of Pharmacy
Cell biology teaching and neuroscience research.

2023 - 2026 | Postdoctoral researcher
University of Geneva, NEUFO
With Camilla Bellone. Cerebellar pathways, reward circuits and negative symptoms in a genetic-risk model of schizophrenia.

2020 - 2023 | Postdoctoral researcher
Université Paris Cité, SPPIN
With Michael Graupner. Cerebellar activity and locomotor adaptation.

EDUCATION

2016 - 2020 | PhD in Neuroscience
Sorbonne Université, Institut de Biologie Paris Seine.
Supervisor: Peter Vanhoutte. Dopamine/glutamate receptor heteromers and long-term adaptations to cocaine.

2014 - 2016 | Master in Cellular and Molecular Neuroscience
Sorbonne Université.

TEACHING & MENTORING

Université Paris Cité: cell biology, including PASS (since 2026).
University of Geneva: scientific oral communication (2024); LabLife, MSc Neuroscience (2025).
Sorbonne Université: cellular organization and neural/hormonal signaling (2016 - 2019).
Research mentoring of undergraduate and master students.

SELECTED AWARDS

2021 | Addictology Research Award, Académie de Pharmacie.
2019 | NeuroFrance Thesis Prize, Société des Neurosciences.

Selected publications

Original research, reviews and book chapter. Publisher records are available through each DOI.

Andrianarivelo A, Stein H, Gabillet J, et al. (2026). Cerebellar activity is triggered by reach endpoint during learning of a complex locomotor task. **Nature Communications**, 17:8861.
doi: 10.1038/s41467-026-74823-1

Saint-Jour E, Allichon MC, **Andrianarivelo A**, et al. (2025). Nuclear calcium signaling in D1 receptor-expressing neurons of the nucleus accumbens regulates molecular, cellular, and behavioral adaptations to cocaine. **Biological Psychiatry**, 98(1):34-45.
doi: 10.1016/j.biopsych.2025.01.013

Forget B, Garcia EM, Godino A, et al. (2022). Cell-type- and region-specific modulation of cocaine seeking by microRNA-1 in striatal projection neurons. **Molecular Psychiatry**, 27(2):918-928.
doi: 10.1038/s41380-021-01328-2
